1 What is HTML? what does HTML stand for

HTML stand for Hyper Text Markup Language.

HTML is used to create and structure web page. It tells the browser how the content of a webpage should be display

2 Why this HTML called a markup language?

is HTML a programming language?

HTML is called a markup language

because it use tags to make a structure and content on a webpage

for example :-
`<h1> welcome </h1>`
`<p> this is a paragraph.`
`</p>`

3 What is different between HTML tags and HTML Elements?

HTML tags :-

A tags is markup written inside angular bracket

Example :- `<p>` `</p>`

HTML Element :-

An HTML Element includes opening tags, content and closing tag.

Example :-

<P> Hello world </P>

4 what is <!DOCTYPE.html>? is it an HTML tag?

• <!DOCTYPE.html> is declaration that tell the browser that the document is an HTML5 document. It should be placed at the top of the HTML Document.

• It is not a HTML tag. It is a declaration.

5 Explain the basic structure of HTML Document. what are the purpose of <HTML>, <head> and <body>?

i) <html>

It is the root element of the HTML document. All HTML placed inside it.

ii) <head>

it contain information about the webpages.

- Title
- meta information
- CSS links
- Java script links

iii) `<body>` tag is used to define the body of the webpage.

- It contains all visible content of the webpage.

Attributes like heading, paragraph, image, button, links, etc.

6. What are the HTML Attributes? with example.

- HTML provides additional information about an HTML Document.

- They are usually written inside

the opening tags.

Example:-

```
<a href="http://example.com">click here
```

7. What is the difference between `src` and `href`?

i) `src` :-

- `src` stands for source.

- It is used to embed or load a resource into a webpage.

EX :- ``

ii) `href` :-

- `href` stands for Hypertext Reference.

- It is used to create a link to another webpage or resource.

EX :- `<a href="http://example.com">click here`

8 What is the purpose of alt attributes?

i) alt :-
• The alt attributes provides alternative text for an image.

• It is displayed or used when the images cannot be loaded and helps screen reader understand the images.

Ex:-

``

9 Explain the difference between Block-level element and inline element with examples.

i) Block-level Elements :-

Block-level element start on a new line and usually take the full available width.

Ex:- `<div>`, `<p>`, `<h1>`

ii) inline element :-

inline element do not start on a new line. They only take space required by their content.

Ex:-

`<span>`, `<a>`, `<strong>`

10) What is Semantic HTML? what is different between semantic and non-semantic element.

Semantic HTML :-

Semantic element clearly describe the meaning of their content

Ex:-

`<header>`, `<nav>`, `<article>`, `<section>`

Non-Semantic HTML :-

Non-semantic element do not clearly describe meaning of the content

Ex:

`<div>` `<span>`

11) What is different between `<div>` and `<span>`?

`<div>` :-

- Block-level element
- start on a new line
- used to group larger section

Ex:-

`<div>`

`<h1> Hello world`

`<p> welcome </p>`

`</div>`

span :-

- inline element
- Does not start a new line
- used to style or group small part of text

Ex :-

<p> Hello world </p>

12 What are the different between HTML list?

, , <dl>

There are three main types of HTML list

1) - unordered list :-

Displays item using bullets

Ex :-

```
<ul>
  <li>...</li>
  <li>...</li>
</ul>
```

2) - ordered list :-

Display item using numbers

Ex :-

```
<ol>
  <li>...</li>
  <li>...</li>
</ol>
```

3) <dl> - Description List :-

used for terms and their descriptions

Ex :

```
<dl>
  <dt>...</dt>
```

13) Explain the important HTML tags: `<table>`, `<tr>`, `<th>`

i) `<table>`, `<tr>`, `<th>`, `<td>`

i) used to create a table - `<table>` `</table>`

ii) stand for Table Row `<tr>`
used to create a row

iii) `<th>` stand for table Header

used to heading cells

iv) `<td>` stand for table data

used for normal data cells

Ex: -

```
<table>
```

```
<th> ... </th>
```

```
<th> ... </th>
```

```
</tr>
```

```
<tr>
```

```
<td> ... </td>
```

```
<td> ... </td>
```

```
</tr>
```

```
</table>
```

What is a purpose of `<meta charset="UTF-8">`
and viewport meta tags?

`<meta charset="UTF-8">`

The `<meta charset="UTF-8">`

tag is used to specify the character
encoding of an HTML document

UTF-8 allows web pages to correctly display

* English, Tamil, other, special.

ii) viewport meta tag :

The viewport meta tag is help a web page display properly on mobile phones, tablets, and different screen sizes.

Syntax :-

`<meta name="viewport" content="width=device-width" initial-scale=1.0;`

* `width=device-width` - The webpage width adjust to the device screen width.

* `initial-scale=1.0` - set initial zoom

What is open graph? (con)

• og is a set of meta tags used to control how a webpage appears when it is shared on social media platforms.

• Title, Description, Image, link

Example

```
<meta property="og:title" content="web">
```

```
<meta property="og:description" content="web">
```

```
<meta property="og:image" content="1.jpg">
```

```
<meta property="og:link" content="http://x.com">
```

i) og:title :-

• It specifies the title of a webpage when shared on social media

ii) og:type :-

• It specifies the type of content

Ex:

```
<meta property="og:type" content="website">
```

iii) og:image :-

It specifies the image that should be displayed when the webpage is shared.

iv) og : Description :-

• it is a short description of the webpage

Ex :-

<meta "property = "description" content = "webpage">
